PROGRAM PROPOSAL FOR PARTNER SCHOOLS

BUILD A VENTURE ACROSS BORDERS

Global Youth Entrepreneurship Program

Israel: where challenges become innovation

Classes from Israel, Singapore, Europe and the USA

Two tracks: Tech entrepreneurship and Social (SEL) entrepreneurship

THE IDEA

ONE PROJECT. FOUR CLASSES. ONE PIVOT.

Four classes work on the same entrepreneurship program at the same time. Students work in teams on a real venture project, and we propose teams mixed across countries. Methodology, mentors and coordination all run from Israel, so every class gets the same quality of program.

Israel
The pivot. Hof HaCarmel excellence class

Singapore
Partner class

Europe
Partner class

USA
Partner class

WHY ISRAEL

Where challenges become innovation

Israel is our learning lab for entrepreneurship. Not a list of Israeli inventions and not a political story, but a way to see how a real need becomes a solution. For every story we ask: what was the challenge, what need did it create, and how did an idea become technology?

Water scarcity
Water and desalination technology

Harsh farming conditions
Agriculture and irrigation innovation

Medical needs
Advanced medical devices

Information security
A global cyber industry

Limited resources in space
Satellites and space technology

Defense needs
Advanced protection systems

WHO WE ARE

MAOF LECHINUCH. PROVEN IN ISRAEL.

Maof LeChinuch is an Israeli education nonprofit that develops programs where students learn by building: entrepreneurship, technology and social-emotional skills. This international program is built on what already works in our schools.

Programs approved by the Ministry of Education

Maof's programs are listed in the Ministry of Education's Gefen catalog, so schools can adopt them as part of their official offering.

A Generation Without Boycotts hackathon

Ten 90-minute sessions and a peak day, where students build tech solutions to boycott and shaming. Run in Hof HaCarmel schools and the Kfar Galim Youth Village.

Ministry of Education 720 project

Managed by Maof's pedagogical lead across 23 schools in the Haifa District.

National recognition

A student entrepreneurship project led by Yarit Coifman won first national prize at Yotzrim Shinui (2022).

THE PROGRAM

TWO TRACKS. ONE JOURNEY.

TRACK A

TECH ENTREPRENEURSHIP

Build a technology venture with industry mentors

- A mentor from Israeli industry joins the weekly session (mentors to be confirmed)
- Mixed teams choose a challenge, validate it and build a prototype
- A panel judges feasibility across the classes

Winning class: NIS 100,000 grant (subject to feasibility)

TRACK B

SOCIAL ENTREPRENEURSHIP (SEL)

Technology for Humanity: a tech solution to a human challenge

- Built on Maof's Gefen-approved Entrepreneurship and Change Hackathon, grades 5-9
- Teams tackle boycotts, shaming or online safety with a meaningful technology component, such as an app
- Each class holds a mini-hackathon, then the best ventures reach a final showcase

Outcome: a social-tech prototype

HOW IT WORKS

THE 15-SESSION JOURNEY

Students go from a real challenge to a tested prototype, working in teams. The structure follows Maof's 15-session program, fitted to each school's calendar.

1	**Know ourselves**	Strengths, confidence and teamwork across countries.
2	**See the other**	Empathy, influence and different points of view.
3	**Choose a challenge**	Teams research it and define the real need.
4	**Build a prototype**	Ideas, a chosen solution and a prototype, with mentor feedback.
14	**Class mini-hackathon**	Teams present, students score the ventures, the best move on.
15	**Final showcase**	The best ventures pitch to the school, parents and guests.

Track A ends with: a feasibility case and a prototype, judged by a panel

Track B ends with: a social-tech prototype, shown at the final showcase

THE NEXT STEP

Israel Innovation Journey

Our vision: a delegation of international students who completed the program visits Israel for a few days. They meet researchers and young founders, visit the Technion and innovation centers, and end with a joint hackathon in mixed teams with Israeli students.

SAFE, SIMPLE, READY TO START

WORKING TOGETHER

An adult in every session
A teacher moderates every live meeting.

Themes, not people
Never real names or incidents.

Privacy by design
Parental consent; PDPA, GDPR, FERPA/COPPA.

Clear rules for mentors and IP
Civilian topics, simple IP agreement.

What we ask of schools

- One excellence class, committed to the full 15 sessions
- A teacher liaison who joins the sessions
- A weekly slot in school hours
- School and parent approvals

What your students get

- Mentors from Israeli industry (Tech track)
- Teamwork with students from other countries
- A chance at the NIS 100,000 grant (Tech track)
- A real social-tech solution (Social track)

NEXT STEPS

1. Choose a track
2. Name the class and teacher
3. Agree the weekly slot
4. Sign a short pilot agreement

Eyal Coifman
CEO. Industrial and management engineer, formerly at the Technion R&D Foundation.

Yarit Coifman
Educational and Pedagogical Lead. Programs approved in the Gefen catalog.
